INFANT/CHILD HEALTH HISTORY

The primary system in the body, which coordinates health, is the NERVOUS SYSTEM. The vertebrae (bones of the spinal column) surround and protect the delicate NERVOUS SYSTEM. A MISALIGNMENT in the SPINE and NERVOUS SYSTEM is a condition called a VERTEBRAL SUBLUXATION. A VERTEBRAL SUBLUXATION results in nerve malfunction, which results in less communication between the affected NERVES and the function of the BODY.

Vertebral Subluxations can have Physical, Emotional and Chemical causes and effects.

The information below will help us to see the types of **PHYSICAL, EMOTIONAL & CHEMICAL** stresses your child has been subjected to, how they may relate to his/her present spinal, nerve and health status and whether they may have caused **Vertebral Subluxations** to occur.
